

eventmagix for virtual and Hybrid events

Virtual or hybrid events

- According to actual situation, we understand that the events sector is initially directed to virtual events and later to hybrid events in which there will be people connected from home and others physically.
- In eventmagix we want to offer the best user experience for attendees who connect online and for the people who attends in person.
- An user experience tailored to the device from which the attendee connects.

**Registration

**Customized
WebApp**

**Integrated
Live Streaming**

**Native
Apps**

Virtual event WebApp

Customized WebApp with all the information of the event

Set it up with the modules what you need for your event

The access to the WebApp can be public or private

Live streaming sessions

Live streaming integration with the information of each agenda session

Ability to interact with questions to the speaker and live voting

The user can choose how he wants to watch the streaming and participate

Networking

ONE TO ONE

Feature to schedule meetings with other attendees

VIDEOCONFERENCES

Meetings can be held by videoconference from the WebApp itself and from the native App if there are in-person attendees

Sponsorship

Sponsor carousel on the Home of the WebApp

Sponsor section with all the information of each one

Ability to include sponsor logos in Live Streaming customization

Sponsor product presentations on Live Streaming

Streaming

Connecting up to 8 speakers for round tables

Virtual stage customization with background images

Share presentation, questions to speakers and live voting results

Simultaneous translation

Hybrid events

The best user experience for the in-event attendee is the native mobile App:

Native mobile App with all the event information

The same content manager used in WebApp for online attendees

Possibility of interacting with other physical assistants and also with online users

Each user "chooses their own adventure", desktop WebApp or native App for mobile devices
